TMS Curvy Controls X64 [Updated]

Overview: All components from the TMS VLC UI Pack can now be found here. Whether it is because they need to fill in a form or perhaps use filters to make a query within a spreadsheet or log, using list or combo boxes simplifies the design and user experience at the same time. In case the selection is a rather complex choice and you cannot rely on fixed answers, then using a combo box is a better alternative as users can edit the selected values and get more accurate results. TMS Curvy Controls Torrent Download is a pack of Delphi components designed to enable you to create combo boxes in the popular Apple OSX style with rounded corners. It goes without saying that this does not include solely the combo box, but also its other components, namely the list box and edit box. Depending on the complexity and nature of the values the combo box is designed for, you can optionally add text hints in the edit control. The feature can come in handy when you need users to add their phone number in a specific format, for instance. The hints can also be included per controls and you can even add hover and down images for them if necessary. Speaking of images, you can add multiple pictures in various locations of the combo box, include inside. TMS Curvy Controls Cracked Version

This is a TMS Curvy control with a high level of customization and possibilities. Not only does it come with a read/write property (which is really useful for the properties for the other components of the package) it can also be colorized, from left to right and right to left. It has a rounded corner effect, customizable text and images, a selected and focused effect, a bullet type text, etc. You can add or remove items, change the border width and color, the font color and size, all of these properties can be adjusted in the config file and you can also choose to hide or show the text, images, or bullets. You can even mix and match the customizations between these components! This component makes it possible to have multiple hints per control (e.g. the phone number and the date) and you can even customize the hint text and image(s) per control. TMS Curvy Controls is a simple to use Delphi component that allows you to create your own Curvy controls. What's New in the TMS Curvy Controls?

This VCL control is based on Delphi's list box component with a few enhancements. For example, you can click the left button in the bottom part of a list box (top right button in the edit box, scroll area and scrollbar). Other key enhancements: You can choose a different shape for the bottom part of the list box, making it a perfect fit for any application. If you use a list box with "icons" or other special graphics for its items, you can display them there, too. If you have a special menu of small values in your combo box, you can make it disappear when the user hovers over a special point of the combo box. Technical support: If you experience issues with the component, you can send an email to the author or report the problem on the download page. For troubleshooting or additional technical support, contact me via email or leave a comment on this post. You can also download the documentation and various component examples. Sponsors: If you have the TMS Curvy Controls and would like to support the continued development of this library, please consider sponsoring it. Thanks!
