. This does not include the LootBox Lyfe: Death Bloom DLC, as that is a separate item.. Windows 10 Pro Laptop, Desktop, Alienware, Lenovo and other cheap PCs. Unlock new characters, combat styles, and weapons. From the makers of Call of Duty, comes a game thats the perfect mix of two of the industrys biggest franchises -- Call of Duty and Borderlands. Top seed, \$5,000.Q: how to use wget in c++? I want to do some wget stuff in my c++ code, but there's no such thing as wget or wget in windows command prompt. Is there any way that I can make these commands in c++ or I should install some libraries? Thanks in advance. A: Forget it, there is no way. You have to use system(), exec(), popen() or other system() family of functions, as suggested in the other answers. Q: Scala Range cutting of list is not that efficient I'm new to scala and I am facing a problem in efficiency. I'm maintaining a list, which contains 10000 items, so I need to cut the number of items of this list to 10

and generate a new list. I have tried something like this, but I'm surprised that it takes a long time. `val items = List(1,2,3,4,5,6,7,8,9,10) items.take(10) match { case (x,y) => println(x,y) case _ => println("No Such Element") }` My question is, is there any other efficient way to do this? A: You can use `foreachPartition` method to iterate the list and group the remaining elements `items.foreachPartition(a => a % 10 == 0)` Alternatively, you can use `andThen` method on `Int` `val remaining = items.toList.take(10) remaining.andThen { a => a % 10 }` A: It would be more efficient if you used collections like `scala-collection.immutable.Stream` (or a `List` but not `ListBuffer`) and where you are actually applying side effects (printing here) and not just getting another collection for further consumption. `val items = List(1,2,3,4,5`
